

Week 9: Phase III: Add while loop. Open the program from phase II week 8

We now want to allow for many customers. Use a prime read algorithm.

Add:

- 1) While statement after asking for the customer's name
- 2) After the statement that displays the data to the file, ask for the next customer name and end the while loop with a closing brace bracket.

Note: you will need to add `cin.ignore(80, '\n');` before requesting the next customer name

Test your program.

It should work whether you enter control Z for the first or 5th name.
